Walleye and Northern Pike – the size, the fight, and the thrill are what keeps people coming back year after year!

Amisk Lake is an ideal habitat for northern pike & walleye due to it's large shallow bays, rocky shoals & being fed by the Sturgeon Weir River. In addition, good fishery management practices have allowed for the fishing to thrive. To see the quality of fish, check out our website for the annual Catch & Release Contest winners.

T&D Amisk Camp is located in a bay on the south shore of Amisk Lake, near the mouth of the South Sturgeon Weir River. Amisk Lake is 430 sq kilometers & features over 500 islands. Most of our fishermen fish the south end of the lake, between the South Weir which drains the lake & the West Weir, which feeds into the lake. There are three large bays on the south end of the lake, with three islands close to the camp, providing sheltered fishing opportunities. Guide service can be booked ahead of time, or we can provide you with detailed map information of the lake.
